

# JamBabies is now enrolling.

Here is a look at some of the other programs available at Clinical Connections:

*Speech Kids* is the therapeutic practice of Crisler Lovendahl, M.A., CCC-SLP, and her associates. Therapists specialize in Sensory Integration and Related Disorders, including Oral Motor/Feeding/Apraxia therapies.

*OT Kids* eclectically blends creative and innovative methodologies with traditional principals. Core issues addressed include: sensory processing, fine motor, gross motor, visual processing and activities of daily living. In addition, we place an equal emphasis on hand development from a variety of hand-writing programs.

*The Clinical Consortium* is a professional collaboration located in Bannockburn which provides the opportunity for master therapists to treat and collaborate in a transdisciplinary environment. Young children might enjoy Music Therapy or Pet Therapy, or participate in an ABA-Verbal Behavior Team led by a BCBA.

## JamBabies

---

Designed to enrich development  
for children 0-3 years old across all  
areas of development.

---

# JamBabies (0-3)

---

JamBabies is a therapeutic setting for both the parent and child. Therapists work with each child and family in order to explore their individual strengths and weaknesses and to gain understanding of each child's unique style.

Our goal is to explore play, language, motor, and cognitive stimulation, to introduce helpful sensory activities, to advise about feeding and speech issues, and to develop attention and bonding for all children. We are here to coach all parents about child development.

## Programs

---

### Individual Therapy Clinics

JamBabies intends to provide a parallel service to Early Intervention and our format is unique. We hope to work with parents who just want to learn more about child development, both neurotypical and special needs. We realize that parents often want expert eyes to weigh in on any concerns that arise. Sometimes parents just want suggestions for activities and toys to introduce to their child. Therefore, we have created our 2-part Individual Clinics.

**2-Session Clinic and Write-up: \$125.00**

### 10 Week Group Sessions (60 minutes)

**\$45/ 45 minutes: Group Therapy**

◆ *Kaleidoscope Kids*

This group explores your child's development across our 8 domains: personal-social, independence, fine motor, gross motor, auditory comprehension, expressive language, cognition, and cultural literacy. Our therapists will explore skills in these domains and recommend home programming for each goal area to participants.

◆ *Play and Language Stimulation Group (PALS)*

PALS groups typically include 3-5 pairs of children and their parents. Activities are designed to encourage listening, imitation, words, sensory exploration, and socialization. Parents will learn how speech and language develop and stimulation techniques for an individualized home program.

◆ *Sensory Processing Experiential (SPE)*

Each class will explore sensory experiences; specifically, activities focused around tactile stimulation, movement, heavy work, auditory, visual, and olfactory/gustatory stimulation. Parents will learn about their child's sensory profile in each modality and a sensory diet home program will be developed for each participant.
